SKILLS

Development: Python, JavaScript, HTML5/CSS3, XML, SQL, jQuery, React.js, Redux, Git, MongoDB, Express.js, Node.js
Software: Odoo (formerly OpenERP), Linux, Chrome Dev Tools, PyCharm, Atom, Microsoft Office Suite, Adobe Photoshop, Acrobat

EXPERIENCE

Sales Engineer   06/17 – Present
Novobi
- Increase client satisfaction by liaising between technical team and project stakeholders in Agile environment
- Lead requirements-gathering discussion to minimize project creep
- Initiate gap analysis and demo Odoo features relevant to prospect's business workflow
- Introduce Novobi's strengths and ability to add value to prospective clients
- Customize Odoo modules with Python and XML
- Specific Accomplishments:
    - Gained biggest client to date by presenting thorough demonstrations and addressing pain points
    - Saved client costs associated with order cancellations by developing automated Credit Limit check in Odoo
    - Led marketing efforts around release of a new product, generated copy and video scripts, delivered graphics and storyboards

Portfolio Site   06/18
- Develop site using React.js
- Deploy build using GitHub pages
- Design and create SVGs (using Inkscape), transform to be JSX friendly
- Target and style SVG elements for a unique look and user experience

Writer Duel   06/18
(Personal project, Node.js word game)
- Develop front end using React.js
- Set up project in Google Firebase, use API to sync player data in real time
- Research dictionary APIs to determine word validity
- Build custom dictionary module when no good (free) APIs found
- Deploy to Amazon S3 to invite testing and feedback

Volunteer Full-Stack Developer   12/16 – 02/2017
Hot Rhythm Foundation
(Austin-based nonprofit)
- Improved responsiveness of website
- Increased conversions and decreased support requests by adding tracking of API calls and display of loading messages until async resources were retrieved
- Collaborated with dev team to identify and prioritize tasks

Class Projects
Austin Coding Academy

- Mock Contact List
    - Built front end using React.js and Redux.js
    - Researched database platforms in order to show project outside of class
    - Use Google Firebase documentation to set up realtime database and API calls to persist data
- Tic Tac Toe - jQuery project for JavaScript course

EDUCATION

Austin Coding Academy   03/17
Full-Stack Web Development
The University of Texas at Austin   05/13
